

Blockchain-Based Proof of GDPR Compliance

Deploying blockchain solutions can create unique GDPR challenges. It is sometimes misunderstood that “Blockchain's immutability conflicts with the GDPR's right to be forgotten policy.” However, Dragonchain is built with the principles of privacy by design. We provide **proof of GDPR compliance on blockchain** that won't expose personally identifiable information. This guarantees personal data stored inside will be protected, with respect to user consent.

Dragonchain maintains a provably accurate and tamper-proof on-chain audit log to demonstrate compliance and accountability with regulations (GDPR, HIPAA, other), enabling users to manage preferences and maintain detailed records of users' consent.

Dragonchain can be used to automate the tracking and management of consent, including subject access requests (SAR) and right to be forgotten. With our Proof Systems, organizations can prove that an event happened, when it happened, who it happened to, and who provided any associated service.

Dragonchain makes it possible to prove compliance for all technical requirements (e.g. GDPR, CCPA, the right to be forgotten, subject access requests, data retention) to address the copious amounts of regulation that industries currently face.

Learn more about how Dragonchain gives businesses the tools to adhere to and prove GDPR/CCPA compliance:
